PROFESSIONAL SUMMARY

Backend-Focused Full-Stack Developer with ~2 years shipping production systems across healthcare, fintech, and real-time messaging. I own services end-to-end — schema design, API architecture, generative-AI integrations, queue-backed async workflows, CI/CD, and cloud deployment. Independent work includes a double-entry ledger with idempotent transfers and a microservices-based real-time chat platform; professional experience spans an AI-powered, HIPAA-aligned telemedicine and e-commerce platform.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript
Frontend	React.js, Next.js, HTML5, CSS3, Tailwind
Backend & APIs	Node.js, Express.js, NestJS, Next.js API Routes, REST APIs, Socket.IO
Database	MongoDB, PostgreSQL, Mongoose, Prisma, Aggregation Pipelines
Cloud & DevOps	AWS (Lambda, SQS, S3, App Runner, CodeBuild, CloudWatch, ECS), Docker, GitHub Actions, Redis, RabbitMQ
Integrations	Stripe, NMI, JWT/Argon2 Auth, HIPAA-aligned Workflows, Webhooks, OpenAI API
Tools	Git, GitHub, Postman, VS Code, Claude

PROFESSIONAL EXPERIENCE

Software Developer · Creatixia

Sep 2024 – Jul 2026

Kalyani, West Bengal, India

- Developed and scaled a HIPAA-aligned healthcare, telemedicine and e-commerce platform on Next.js, React and MongoDB.
- Built product catalogs, real-time inventory, order processing, custom discount engines, and RBAC-secured workflows.
- Engineered MongoDB aggregation pipelines and Next.js API Routes powering telemedicine, prescriptions and reporting.
- Integrated Stripe and NMI for PCI-compliant payments; automated audit logging via AWS SQS and S3.
- Ran CI/CD on AWS App Runner and CodeBuild, with CloudWatch monitoring across services.
- Built an asynchronous generative-AI recommendation engine (OpenAI API) that analyzes patient intake data against clinical/product knowledge to auto-generate structured diagnosis and treatment recommendations for the Patient Folder view.
- Designed defensive AI-output handling — JSON-repair for truncated LLM responses and catalog-based hallucination filtering — with PHI stripped from every payload before it reaches the AI service.

KEY PROJECTS

Digital Wallet Ledger – Fintech Ledger System (Solo Backend Developer)

[GitHub](#) | [Live Demo](#)

- Append-only, double-entry ledger (NestJS, PostgreSQL, Prisma) where balances are derived, never stored.
- Idempotent transfers with row-level locking, verified correct under concurrent load; JWT + Argon2 auth.
- CI on GitHub Actions running unit and end-to-end tests against a live Postgres on every push.

ChatApp – Real-Time Messaging Microservices (Solo Full-Stack Developer)

[GitHub](#) | [Live Demo](#)

- Three independent services (auth, chat, mail) coordinated over MongoDB, Redis and RabbitMQ.
- JWT-authenticated Socket.IO messaging, Redis-backed passwordless auth, and cursor-based infinite scroll.
- Fully containerized with Docker Compose; deployed live and publicly reachable.

EDUCATION

Bachelor of Engineering – Mechanical Engineering

Graduated 2023

Dhole Patil College of Engineering, Pune, India | CGPA 7.5/10.0
